

# DOORS & WINDOWS AEROSOL PAINT

## Commercial 1K and professionnall 2K

Contains  
340 g

WE USE  
HIGH QUALITY  
PAINT

**Product contains a high grade curing agent of quality equivalent to manufacturers (OEM\*)**

**The quality of a two component painting in one spray**

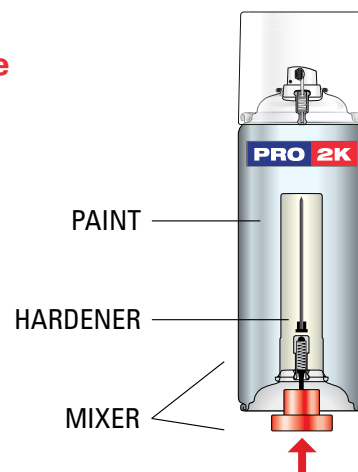

When a repair requires the addition of a curing agent for paint, Genicolor offers the perfect solution with its aerosol 2K PROFESSIONAL SERIES.

The catalyst contained within a separate compartment within the aerosol reaches a level of curing equivalent to the standards of door & window manufacturers.

The components are mixed the moment you press the activator on the can. Once mixed, the aerosol must be used within 12 hours. As activation accelerates the curing process, the aerosol can only be used during this period.

**You can keep in stock without any concerns before the can is activated.**

**Save by avoiding expensive trips to a professional painter shop**

### COMPARING AEROSOLS:

#### 1K - Commercial Series

Contains no cure agents

Resistant to impacts and scratches  
Protects against UV rays  
Gloss level +/- 33% (satin)
